Get The Most Out Of Your Medical Lab Business With Our Online Diagnostic Lab Management System !!!

Let Us Transform Your Lab Culture !

The Gemini – India LIMS is an Online Diagnostic Lab Management System that brings up various diagnoses working online. Here patients get an option to register on the site and login using registered details. Once registered with their address and contact details, the patients may now see a variety of tests conducted by the lab along with their costs. The system allows patients to do the bookings for various tests like CBC, Blood Glucose, KFT, and LFT. The tests also consist of parameters like Hemoglobin, WBC, etc. The system allows users to book any test needed and after successful booking, system calculates costs and allows users to pay online. As soon as the payment is done, the patient test is booked and the lab may now collect samples from patients registered address. After successful testing, the patient or the user gets a notification of test result through an email. The system allows admin to attach a copy of the report into the system and automatically email it to intended patient.

This Online Diagnostic Lab Management System has an **Admin Panel** where the Lab's management can update the records, upload the patient's lab testing results. This side of the system requires an **admin** or **staff** user credential in order to access the features and functionalities. The patients can register their accounts easily and book a lab testing appointment on their side. They can list all of their appointment records with the diagnostic lab and also they can check the updated status of their results and download their lab test results.

Purpose of the Online Diagnostic Lab Management System

The goal of the project is to create an Online Diagnostic Lab Management System that displays multiple online diagnoses. Its main goal is to bring together diverse diagnostic workings and researches on a single online platform (so that anybody may access it). This website automates manual procedures to save resources. Automatic work is thought to be more trustworthy, dependable, and accurate. The proposed system is an online system that ideally includes both a website and a management system. In comparison to a manual approach, the goal of this project is to provide a faster and more dependable service.

Advantages of Online Diagnostic Lab Management System

01

The system allows automate diagnosis system.

02

Allows for faster service.

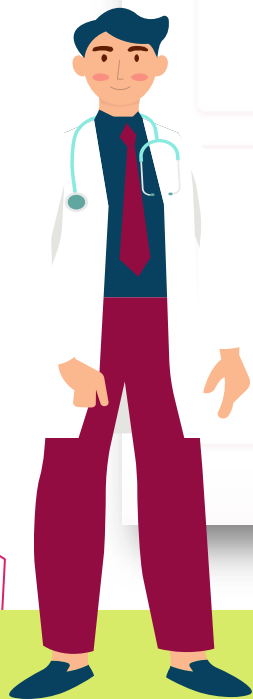

03

Allows increased sales and profits for diagnostic labs

04

Easy , user friendly GUI.

Run on multiple
computers

Access over phone,
anytime, anywhere

Affordable

No installation hassles

Regular software
updates

Hassle free and fast setup
updates

Online customer
support

Easy to operate

Admin Panel Features

- **Secure Login and Logout**

- **Test List Management**

- Add New Test
- List All Tests
- View Test Details
- Update Test Details
- Delete Test Details

- **Appointment Management**

- List All Appointment
- View Appointment Details
- List Appointment's Test Details
- Update Appointment's Status
- Upload test Result/Report
- Download Prescription
- Download Test Result

- **Registered User List Management**

- List All Registered User
- View Registered User Details

- **Manage User List**

- **Manage Account Details/Credentials**

- **Manage System Information**

User Panel Features

- Secure Login and Registration

- Appointment Management

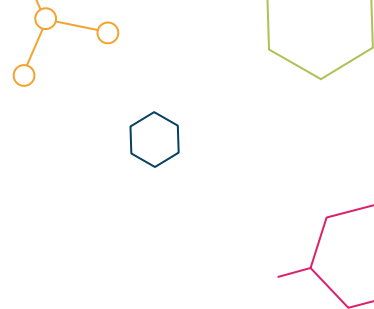

- Booked an Appointment
- List All Appointment
- View Appointment Details
- List Appointment's Test Details
- List Appointment's Update History Details
- Cancel Booked Appointment
- Download Prescription
